

AUTOMOTIVE SAFETY FEATURE

Keeping Cars Safe with OTA Updates

OEMs typically spend a lot of time and resources on quality assurance and testing to ensure that a given configuration of multiple devices will perform correctly.

When an OTA update is required, it is necessary to maintain full coherency of the system configuration. This means it is necessary to move from one known, tested, and fully verified state, to the next. It is not acceptable to end up with a mixed configuration with various devices in alternative states, as this would never pass the test.

AUTOMOTIVE SAFETY CERTIFICATION FEATURE

Automotive Safety and Security Requires Certification Reformation

Vehicle certification is not new; however, it is becoming more complex as the amount of in-vehicle software increases. The certification guidelines in all regions will need to mirror the changing makeup of the vehicle and recognize that a deep understanding of software behavior is required for comprehensive certification to be achieved for the lifecycle of the car.
